

NOVABARRIER®

AWB1000 Liquid Applied Hybrid Air & Water Barrier

NovaBarrier AWB1000 is a liquid applied hybrid air and water barrier sealant that forms a seamless flexible barrier to prevent unwanted water and air penetrating the building envelope. A high-solids formulation, AWB1000 is permeable offering both air barrier performance and water barrier protection. By blocking uncontrolled air leakage, it improves energy efficiency and reduces drafts and thermal loss. AWB1000 also resists bulk water intrusion, bridging gaps and irregular surfaces, and protecting critical penetrations.

AWB1000 bonds to most common building materials, even when damp, without a primer, creating a durable weather proof membrane. It is both sprayable and rollable, and can be used as an air barrier and a rollable liquid flashing.

- **Self seals fastener penetrations**
- **May be sprayed or rolled (applied at 20mils wet)**
- **Easy to repair if damaged**
- **Will not tear or lose effectiveness when exposed to weather during construction**
- **Bonds and cures in wet weather**
- **Primerless adhesion to most transition materials**
- **Compatible with most sealants and waterproofing or air barrier components**
- **Solvent free**
- **18 month shelf life**
- **Available in black in 5 gallon pails**
