

NOVABARRIER®

LF1000 Liquid Applied Flashing

Part of a weather resistant barrier, NovaBarrier LF1000 is a liquid applied hybrid flashing. Unlike traditional peel-and-stick flashing tapes, liquid flashing conforms to irregular surfaces and fills gaps for a continuous air and water seal. It is easy to apply, even in damp conditions, and cures in wet weather.

LF1000 forms a seamless permable barrier that prevents penetration of unwanted water and air through the structure while allowing vapor to move, helping to dry surfaces more efficiently and alleviate mold, wood decay, and corrosion. It remains permanently flexible to accommodate building movement and thermal expansion.

- **Bonds to damp surfaces**
- **Immediately rain ready**
- **Adheres without primer**
- **100% solids to avoid shrinkage**
- **VOC compliant – no odor**
- **Primerless adhesion to most transition materials**
- **Vapor permeable**
- **Reduces steps/saves time**
- **Easily repaired**
- **Self seals around fasteners and rough openings**
- **18 month shelf life**
- **Available in black in 20 oz sausages**

Apply and move on
- no weather delays!
