# Novagard<sup>®</sup> G644 Technical Data Specification

# NOVAGARD<sup>®</sup>

#### DESCRIPTION

Novagard G644 is a heat transfer compound that is formulated with select polydimethyl siloxane fluids in combination with metallic oxide fillers to provide superior thermal conductivity.

# APPLICATIONS

Designed for use as a heat transfer compound in both the electrical and the electronic industries, Novagard G644 is similar to the original thermal compound, G641, only formulated to a higher penetration specification (softer). Characterized by its high thermal conductivity, high dielectric constant, and high dissipation factor, Novagard G644 is an ideal material for use in thermocouple wells, power diodes, transistors, semiconductors, and ballasts, among various other applications. Novagard G644 exhibits excellent longterm storage stability, without the oil separation that is common to other brand names.

# RESTRICTIONS

Do not use in or around highly oxidative chemicals such as liquid oxygen, chlorine, or peroxides. Not recommended for surfaces that are to be painted.

#### AVAILABILITY

Novagard G644 is available in 3-ounce squeeze tubes, 1-gallon pails, 5-gallon pails, and 55-gallon drums.

#### STORAGE

Novagard G644 has a shelf-life of sixty (60) months from the date of manufacture, as indicated by the lot number, when stored in the original, unopened container at, or below, 100°F.

# PRECAUTIONS

Silicone compounds may be cleaned with non-polar solvents such as toluene, hexane, and mineral spirits. Whenever using solvents be certain to observe all proper, safety precautions. Not for application on surfaces that are to be painted

Consult and obey all applicable local, state, and federal regulations for the disposal of solvent and silicone waste. For additional information consult product S.D.S. **PRODUCT SPECIFICATIONS** 

| Physical Property           | Test Method    | Performance Range |
|-----------------------------|----------------|-------------------|
| Appearance                  |                | White Paste       |
| Penetration<br>(worked 60X) | ASTM D217      | 290 — 330         |
| Bleed                       | 200°C/24 hours | 2.0% maximum      |
| Evaporation                 | 200°C/24 hours | 2.0% maximum      |
| Specific Gravity            |                | 2.3 minimum       |

# **TYPICAL PROPERTIES\***

| Physical Property                 | Test Method     | Typical Value                                    |
|-----------------------------------|-----------------|--|
| Thermal Conductivity              | Hot Wire Method | 0.62 W/mK  |
| Volume Resistivity                | ASTM D257       | 1.5 x 10 <sup>15</sup> <b>Ω</b> /cm <sup>3</sup> |
| Dissipation Factor                | ASTM D150       | 0.0032   |
| Dielectric Constant               | ASTM D150       | 3.81   |
| Dielectric Strength<br>10 mil gap | ASTM D149       | 400 v/mil  |

\*The values outlined reflect testing that was conducted under laboratory conditions, actual results may vary. The information provided in the above table is not intended for use in preparing specifications. Please consult the manufacturer for additional information.

# ADDITIONAL INFORMATION

Novagard believes that the information provided is a true and accurate description of the typical characteristics of the aforementioned product; however, it is the responsibility of the individual user to thoroughly test the product in their specific application to determine performance, efficacy, and safety.
